

Intro to AI in Medicine

Lec 16: Interactive Case Study

Last time

- Discussed AI Superintelligence
- AGI vs Superintelligence
- AI Singularity
- Talked about alignment issues in modern day and how they might translate to issues with a rogue AI (Paperclip problem)
- Arvind guest lecture about working at Doximity

Today

- Interactive Scenario

[ABOUT](#) | [PROSPECTIVE STUDENTS](#) | [CURRENT STUDENTS](#) | [ALUMNI](#) | [INDUSTRY](#)

Background

- You and 3-5 other physicians from various disciplines are on the AI rollout committee at UNC Hospitals
- UNC received a \$15 million grant to be the first hospital to roll out a suite of AI related diagnostics
- However, two weeks in things aren't going so smoothly
- You have to take in all the info, and come up with a decision to present to the Chief Medical Information Officer (CMIO)

Workflow

- You'll first have 5 min in breakout rooms to look over the documents.
- Then, stakeholders will pop into your room for 7 min at a time. They work with a different aspect of the system everyday, so by asking them questions you can learn about things working well or not so well
- At the end, you have 5 min to think before giving a presentation to the CMIO (me)

Three Key Stakeholders

- James Adams: Engineering lead at Oracle Healthcare
 - Eduardo Canto: UNC Hospitalist
 - Sam Alberto-Fernandez: Patient in the ED that just got admitted
-
- More info on all these people in your handout
